Papers may cover a wide range of topics in biomechanics and biomedical engineering namely experimental/clinical data acquisition and computer-based methodologies and simulations.

The main topics solicited from the community are as follows:

- Biomechanics and cardiovascular tissues
- Rheological property of blood: modeling
- Atherosclerosis plaque: mechanism and modeling
- Biomechanics of soft tissue by MRI, CT, US
- Technology innovation in medical devices
- Stenting within the Cardiovascular System
- Multiscale modeling of the Cardiovascular System: Disease development, progression and clinical intervention
- In vivo bone remodeling mechanics
- Multiscale biomechanics of bone fractures
- Biomimetic implants for articular cartilage repair/regeneration
- Computational methodologies in diagnosis and surgery planning

Papers of four full pages maximum should be written in the following format (the template is available in the web site specific section).
